DEPARTMENT OF COMPUTER SCIENCE ENGINEERING

Declaration

The Project Report entitled **"Title of the Project"** is a record of Bonafide work of **Firstname Lastname – 25YYYYY, Firstname Lastname – 25YYYYY, Firstname Lastname – 25YYYYY** submitted in partial fulfillment for the award of B. Tech in Computer Science and Engineering. The results embodied in this report have not been copied from any other departments/University/Institute.

Abstract

The global travel and tourism sector is experiencing rapid growth, but planning a trip remains complex, forcing travellers to use multiple different apps for flights, trains, and hotels. This fragmented approach causes delays, confusion, and a poor user experience. To tackle this, our project focuses on the Design and Development of an Integrated Tourism Platform for Flights, Trains, Hotels, and Hidden Destinations. Our core aim was to successfully implement a unified, single-window website that dramatically simplifies the entire travel process for the modern global traveller.

The platform is structured around four primary, fully interconnected modules. It offers seamless booking for Flights (with real-time fares and availability, including the critical function to compare and sort packages from cheapest to highest) and Hotels (with a vast inventory, user reviews, and similar pricing comparison tools). Crucially, the platform includes a comprehensive Train Ticket Module with essential functionalities like live running status and PNR checks, addressing the high demand for rail travel information within the region.

The most innovative feature is the dedicated Hidden Destinations Discovery Module. This system uses smart recommendations to suggest off-beat, lesser-known, and culturally rich locations globally. By promoting these hidden gems, we are not only enriching the user's journey but also supporting local communities and encouraging more sustainable and diversified tourism. The system is built using robust, modern web technologies and is fully responsive across all devices. In summary, this project delivers a complete, reliable, and user-friendly digital solution that significantly enhances the experience of planning, booking, and exploring travel worldwide.
